

Renewable Energy Sustainable Solutions

Rensus Ltd are specialist solar panel installers and suppliers of renewable energy products in Scotland and across the UK. We are solar panel installers who offer excellent quality solar panel products which are amongst the most efficient and best value in Europe. In March 2009, German comparative tests put our solar hot water heating systems top in performance once again. We offer the full design to installation service for solar energy systems. We are fully accredited under the Microgeneration Certification Scheme (MCS 1219) to offer MCS approved solar hot water systems and solar PV systems. We are also members of the REAL Assurance Scheme Code. Based in Stirling, Central Scotland, we are within easy reach of Edinburgh, Glasgow, Falkirk, Perth and Dundee, and can meet you to discuss your solar water heating requirements. Alternatively, feel free to visit our design office and renewable energy technologies showroom where you can see some of our solar water heating products on display.

Reasons to have confidence in our solar products

- Around 1,000,000 m² of our solar panels produced since 1979.
- Winners of comparative solar performance tests in Germany against 12 of the major solar manufacturers (March 2009).
- 1000 m² of our solar panels are sold each day across Europe.
- Key part of the first passively heated office block in Europe.
- Multiple awards for excellent solar water heating products since 1987.
- New Zero carbon solar panel manufacturing facility.
- Reliability: 10 Years Solar panel guarantee with life expectancy in excess of 25 years.
- Environmental commitment with end of life responsible recycling policy.
- Get from 50 to 70% of your annual hot water from the sun from our solar panels.
- Inherent strength and durability of our solar panels

- Our solar panels are grant approved products.

Rensus Ltd, a Scottish renewable energy company, was established by qualified engineers and as such, it is our underlying principle to offer highly efficient and affordable renewable energy systems. We are also members of the Scottish Solar Energy Group (SSEG). Find out more about the Rensus team [Award Winning Solar Products](#) The hot water solar panels we supply were tested to be the one of the most efficient in Europe (ISFH 2001). In subsequent comparative testing in 2008 our solar panels heating systems came top. Furthermore, there are 600,000 square metres of our German manufacturers' panels installed around the world, equating to a saving to date of 240 million litres of heating oil. Their headquarters (pictured below) is the first passively heated office block in Europe. It uses a large buffer tank (seen protruding from the roof) and a large panel surface. The resulting energy consumption is around 10% of that of standard offices.

Commercial Solar Hot Water We work closely with architects, contractors and of course the public in order to promote the use of renewable energy and sustainable building products in both new builds and renovations. We offer solar design and solar installation services for large solar water heating projects including; solar heated swimming pools, community centres, solar hot water panels for hotels, apartment blocks, solar panels for hospitals and solar heating for schools. Have a look at our services section for examples of large scale solar water heating projects using the products we supply.

Environmental Commitment "Blauer Engel" label

All Wagner & Co collectors have been awarded the environmental label "Blauer Engel", one of the world's oldest and most prestigious eco-labels. It means that when Wagner & Co solar systems have reached the end of their service-lifetime, after numerous years of reliable operation, our company is willing, to take back and recycle your solar collectors.
